ShippyPro

Challenge

Test yourself with a simple exercise!

Try to create a PHP algorithm that considers the different airport's codes in Tab 1 and finds the best price (up to a maximum of two stopover).

**Enjoy
and send us the solution!**

Tabella 1 - airport.
- id
- name
- code
- lat
- lng

Tab 2 - flight.
- code_departure
- code_arrival
- price
